

# **PCH SECURITY PLUS TAKES NETWORK SECURITY A STEP FURTHER**

# PCH SECURITY PLUS TAKES NETWORK SECURITY A STEP FURTHER

Network security is fairly universal: [all businesses need](#) it, IT providers who offer it are pretty common, and much of the procedures and protocols have become standardized. We have fallen into a security “comfort zone” of sorts where we feel as though we need never worry about network security again because the standard measures taken are all-encompassing.

That [complacency](#) is one of the top reasons for data breaches.

[The Verizon 2013 Cyber Crime Survey](#) found that 62% of breaches were targeted at small to medium sized companies and

according to the [National Cyber Security Alliance](#), 60% of those affected will go out of business within 6 months.

In today's modern age of advanced cybercrime and data reliance, we need something more than just a security system. We need something that goes the extra step to ensure not only that your downtime is as reduced as humanly possible – if not eradicated – but also that your organization's critical technology continually runs at its highest level.

We need something like PCH Security Plus for business.

## WHAT YOU SHOULD EXPECT FROM YOUR NETWORK SECURITY

Advanced technology security systems do offer several broad spectrums of coverage. But it's the things they don't offer that which makes PCH Security Plus different.

### Planning and Budgeting of Annual IT Costs

Do you know what you'll pay for your network security every month? Every year? You should know what costs are coming, and be able to consistently predict your budget.

### Get More Layers of Security than Most

Hackers are smart. Employees are forgetful. Even with some of the strongest network security systems out there, bad things can happen when you rely only on them. You should be more secure, and we provide those layers for you.

### Reduce System Downtime

When your system is safe, a fantastic byproduct is that you [stay up-and-running](#). Less downtime means more productivity and less stagnation. We keep you moving onward and upward.

### Quickly Resolves Technical Issues

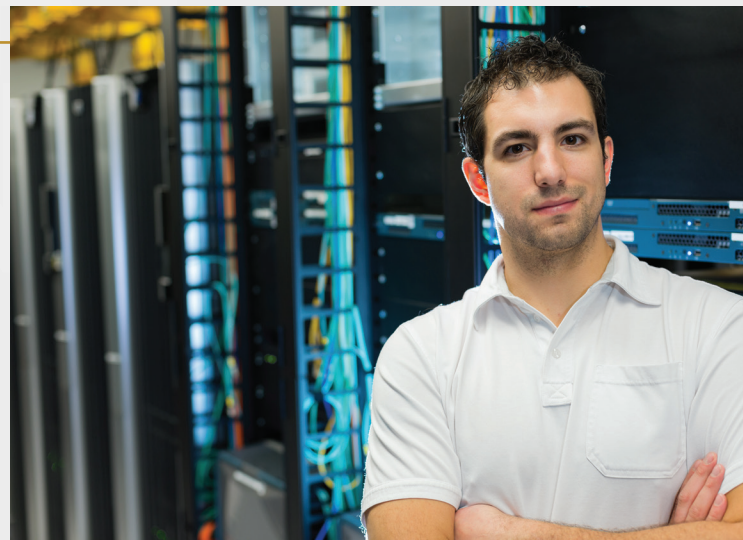

Things happen. Security systems need a tweak every now and then to remedy or prevent them. However, some issues can be detected and repaired remotely – almost as if it fixed itself.

### 24/7 Systems Monitoring

We're always watching. If something looks weird, we check it out. That way, if you do have an unwanted visitor waltz into your network, we can quickly show them the door.

### Remote Help Desk Services

Find something strange? Let's talk about it. You can give us a call and ask any question that's on your mind.

## Secure Remote Support

Remember that strange thing you found? While you're on the phone with us, we can log into your system, look at it with you, and make changes from our end. It's wonderfully quick and convenient.

## Regular Security Updates & Patching

No more worries about licensing or expirations. We take care of all your patches and updates. You can rest easy knowing you have the latest version of everything.

## Network Security Training

Want to bring that big 95% down even further? Let us train your team about the most common mistakes employees make, and how to tighten network security from within.

## DON'T SETTLE FOR THE STANDARD

Your company deserves better than the average. It's time to talk to an IT professional at PCH Technologies about your current network security setup, and what we can do to help you. In addition, we can also evaluate your managed services, your wireless setup, and how Cloud solutions can help you.

OF ALL SECURITY INCIDENTS INVOLVE HUMAN ERROR IN SOME WAY.

## Controlled Internet Access

[According to IBM, 95%](#) of all security incidents involve human error in some way. One way to quickly bring that number down is to make sure your people can't access the websites where hackers often plant their "seeds."
